Self Evaluation(Huijing)

Sprint 1:

In Sprint1, I was assigned to implement the User Story 3 and User Story 4.I created 4 buttons on the top of the application which could invoke different functions. I also finished my work about assigning the value to the block. When the user click the block in the workspace a, A dialog will pop up and there is a text field in the dialog to receive the input value, and user could use this value to compile the project. Everything went well and I communicated with my teammates often. I finished my part on time and integrate my part to others' work successfully.

Sprint 2:

In Sprint 2, I was Assigned to the User Story 1 and User Story 4. I implemented the "create the new tab "function, and the users could also switch to different tabs when they click the tabs on the top of the workspace. I wasted some time when I want to merge my code to my teammates' branch. There are some conflicts but we figured it out on the stand up meeting so we delivered the project on time.

Sprint 3:

In Sprint 3, I created 2 menus on the top of the working space panel, When the user clicked the "File" Menu Bar, 'New Space', 'Save' , 'Load' will appear on the dropdown menu. When clicked on the 'Action' Menu, 'Run' will appear on the dropdown menu. I also changed the square block to oval block. In this sprint, everything went well. We cooperated better than before. All the work was completed on time.

Sprint 4：

In this sprint，I calculated the velocity for this project. I also discussed the tasks in this sprintand how to implement the new function with my teammates. So far, we have completed all tasks on time. In this project, I learned how to develop in an agile team.
