Self Evaluation

In the first sprint: I finished two user stories including:

1. As a user, I want to have a container of 7 different types of block, so that I can

   drag and drop blocks from the container of blocks into the

2. workspace.

   As a user, I want a workspace to hold all the instances of the blocks, so that I can

   work on them.

In the first sprint: I finished two user stories including:

1. As a user, I want to connect blocks in the workspace by linking the input of one

   block to the output of another block, so that I can compile them.

2. As a user, I want to compile the blocks in the current tab, so that I can know if the

   file we created is correct.

In the first sprint: I finished one user stories including:

1. As a user, I want to connect blocks in the workspace by linking one oval block to

   another oval block, so that I can compile them.

In the fourth sprint: I finished the STAN report.

Overall, I attended all the sprint meetings including planning, review, and retrospective.

Specially, in the sprint planning, I was responsible to prototype the original user stories

for my teammates to review and refine. Also, I can deliver results timely. I will evaluate

myself as a self-motivated and reliable teammate.
